## Difficult cards and their constellations

---

### Foreword

The Lenormand-style oracle cards have been around for centuries.  
And so have some of the problems we encounter when working with them.

Some of the cards are our friends from day one.  
We can instantly “feel” and memorize their meanings, and interpreting them in a spread goes like clockwork almost every time.  
Others are more enigmatic and difficult to interpret.  
And some of their constellations remain a mystery to us.

This is when this book should be consulted.  
This indispensable prop can be your “little helper” whenever a certain card or combination seems to make no sense to you at all.

It contains a full list of all 36 cards in connection with each and every other card of the spread.

You can use it for counter-checking your statements as long as you feel still a little insecure, or as a kind of “cheat sheet” when a certain constellation in your spread seems all “Greek” to you!

However, whichever way you do, please make sure you take a good look at the spread first and take all the surrounding cards into consideration.

Then adapt the “sample solutions” in this book to your general interpretation!

Your intuition should always be your most important guide!
